Chart 1: Zanzibar Inflation Rate from January, 2014 – February, 2017

Source: Office of Chief Government Statistician, Zanzibar

Chart 1 above shows the movement of the headline inflation rate from January 2014 to February 2017. The trend shows that in January to April 2015, the rate of headline inflation was very lower compared to the rest of other months followed by the months of October 2016 to January 2017.

Explanatory Note

The CPI measures the average percentage changes over time (between two time periods) in the prices of a “basket” of consumer goods and services acquired by households (the market basket) in Zanzibar. The Zanzibar CPI covers prices of 343 products collected in 641 outlets in Unguja and Pemba urban Centers. The goods and services included in the ZCPI basket are classified according to the UN COICOP (Classification of Individual Consumption According by Purpose) with 12 divisions.

The ZCPI weights are based on both monetary and non-momentary expenditures relating to consumption for households in Zanzibar for the 2014/15 Household Budget Survey (HBS). The weight is based on expenditures of both urban and rural households. Both base price and index has reference period of January 2017.

The computation of indices at elementary level based on geometric mean of the price relative while at higher level the Laspeyres formula was to compute the aggregate indices.
